

**BULLETIN NO. 18/19-005**

**DATE: 13 Feb 19**

**TO: ALL ISR Oval / Enduro Affiliates**

**SUBJECT: Cometic gasket kit listed (335-275 Cometic) as approved for F-500 has become changed and the part number is now deemed illegal.**

The steel shim style gasket offered by Cometic is substantially thinner than the original Cometic gasket and the replacement gasket offered by its competitors.

This gasket is considered illegal for competition.

The original spec for the gasket is 1.82 MM or .072-inch thickness compressed.

At this point we recommend Wonderosa or original Polaris gaskets as the replacement when rebuilding. We will advise all racers when the Cometic company notifies us that it will either no longer offer the correct gasket or will change the kit contents to include the correct dimension gasket.
