

BULLETIN NO. 20/21-015 DATE: 23 Dec 21

TO: ALL ISR Oval and Enduro Affiliates

SUBJECT Fuel pump for fuel injected sleds remote from the tank.

Oval Sprint F-III and Enduro Competition

Due to requests from chassis' builders and race sled owners, having expressed a need to be able to locate the fuel pump for fuel injected sleds remote from the tank. The request is based on ease of construction, lower costs, and safety consideration in mounting of production style fuel pumps and tanks

ISR will indicate to all technical inspectors that remote mounted fuel pumps will be allowed to be used in new builds, or repair of current built chassis.

Special attention must be paid by the builder to the selection of appropriate high-quality hoses, tubing, connectors, and tanks to ensure the safety of the vehicle and driver. Components used must be able to withstand, heat, vibration, and shock. The components must also be mounted and routed in such a manner to ensure driver safety, and prevention of the incidence of fire in case of a on track crash.

All electrical wiring and switching devices shall also be selected with high quality components as to prevent electrical issues and possible cause of fire.

ISR recommends that individual builders contact their respective race department advisors concerning the technical specifications of the fuel system used, especially in the areas of pressure, flow, and volume of fuel supply.

Technical inspector's approval as to the appropriate design and construction will be final.

This is effective 12-22-2021.
