

BULLETIN NO. 22/23-017 DATE: 11 Nov 23

TO: ALL ISR Sno Cross Affiliates

SUBJECT: Sno Cross Ski-doo primary clutch

Ski-doo primary clutch with and without windows with same part number.

Attached is a photo showing our P-Drive clutch on the 2024 Ski-Doo 600RS. You will notice one has the windows of the spider filled in and one does not. The clutch with the windows not filled in has been used for the past several years. Many teams also have spare clutches with the windows not filled in. There was a supplier change and now the windows on some have been filled in.

This winter we will see 2024 sleds with and without the window filled in with the same part number. If they are using last year's clutches it is the same part number.

weight of both clutches are within + or – filed spec.

Below is a photo of the clutch with the windows filled in.
